

3/4" NPT Regulator Service Kit (D04-1046)

RegO® has moved to a vented design in all their regulator models. GSI began using these vented regulators in the first quarter of 2014. On some larger portable dryer burners, erratic pressure control has been observed during the high fire operation when using the 1/2" size of this new regulator design. Since the order is for individual service parts, GSI has supplied you with the 3/4" regulator and reducer bushings. Recommendations from RegO® and testing have confirmed that the 3/4" regulator provides stable pressure control for all burner sizes. This will ensure that regardless of what burner application you are servicing, the regulator will provide consistent pressure control. The bushings allow you to use the regulator in both 1/2" and 3/4" pipe sizes.
