InterSystems MasterWeigh Infinity Installer's Guide Site Preparation

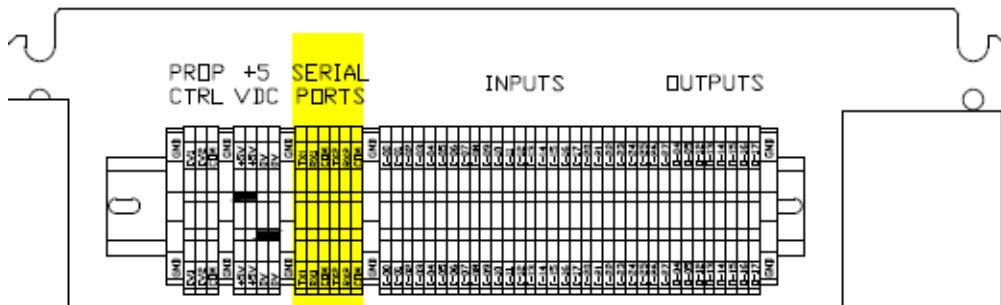

Printer

Star SP 712 Serial Printer

Note: System will work with discontinued Star SP312 Serial Printer

- **Printer attaches to Com 1 in the Control Box**

- **Printer uses standard bulkWeigh printer cable from Harland Technologies**
 - Tx1 on Terminal Strip to Pin 3 on DB 25 male connector
 - Rx1 on Terminal Strip to Pin 2 on DB 25 male connector
 - Com on Terminal Strip to Pin 7 on DB 25 male connector
- **Default baud rate on printer is 9600-N-8-1 no adjustment needed**
- **Default baud rate on IND 780 com port is 9600-N-8-1 no adjustment needed**
- **For installs that require a 2nd printer wire 2nd printer to Com2 and set program for # of printers to 2**

Understanding the Navigational Interface

Navigate in the applications and configure the IND780 using

- Navigation keys
- Scale function keys
- Softkeys
- Alpha keys (that appear on-screen when a field requiring alphanumeric data entry is selected)
- Application Keys
- Numeric keys
- Optional external keyboard

The locations of these keys and the display screen area are shown in Figure 2-2.

Figure 2-2: Front Panel Components and Key Locations

Frequently Used Soft Keys

SETUP		EDIT	
OK		CANCEL	
NEW		DELETE	
EXIT		ESCAPE	
DOWN		UP	
START		TIME/DATE	

Setting Jog Tables

Important During jog setup, it is imperative that the Upper Garner never empties, or the jog values will be incorrect.

- Navigate to Main Menu – Idle
- Press the Config Soft Key

- Arrow to Jog Table
- Press Edit Soft Key

Front Panel Configuration:

Note: All setup and configuration should be performed from the Pc bulkWeigh program. Front panel configuration is available if bulkWeigh unit will not be attached to a bulkWeigh Pc.

- Navigate to Main Menu - Idle

- Press the Config Soft Key

- Arrow to appropriate Menu and press Edit Soft Key
- Make changes in necessary menus
- Press the Exit Soft Key to exit each menu
- Press the Print Soft Key to print setup (optional)
- Press the Exit Soft Key to exit setup menu
- Indicator will re-boot

Calibration instructions for Intersystems installation tech use only. Official calibration must be performed by certified scale technician. Page 1 is overview of entire process. Subsequent pages provide more detail to set Capacity/Increment, details of Cal menu, Calibration steps.

Metrology Switch

If the metrology switch (S1) is placed in the approved position (On), changes to the Scale branch of setup and other metrologically significant areas are not permitted. Access to the metrology switch may be sealed in conformity with local regulations in "legal-for-trade" applications. Figure 2-1 shows the location of the metrology switch, immediately adjacent to the Compact Flash card and PLC module location.

Figure 2-1: Metrology Switch, Location (left), OFF (upper right) and ON (lower right)

- Ships from Factory in default Off position
- All setup and configuration should be done with switch in Off position
- Switch must be in On position after calibration is complete and unit is ready for use

Thru setup navigate to Scale 1 and with scale empty, capture zero.
 Press Capture Span and system will prompt to set weights on
 System will ask for weight value, enter value
 System will calculate and calibrate

Calibration Icons		
Icon#	Function#	Explanation
→ 0 ←	Capture Zero	Resets the zero condition of the scale
→ ←	Capture Span	Resets the span value with known test weights

Basic Calibration-Setting Capacity/Increment

- Capacity & Increment Size
 - Sets Primary Units to (lb)
 - Number of Ranges to (1)
 - Capacity & Increment
 - Over Capacity Blanking (5)
- Navigate to [Scale 1 / Capacity & Increment]
 - Set lb as primary units
 - 1 range
 - (example) 40000 lb x 20 lb
- Exit to Scale 1 menu

IP=192.168.0.1		24/Mar/2006 12:10	
Scale 2 Capacity & Increment			
Primary Units	kg		
# of Ranges	1		
> 1 <	60.00	X	0.01 kg
Blank Over Capacity	5	d	
←			

Internal usage only

Definition of calibration setup menu items:

Only use Traditional for calibration

Never use Step Calibration

Never use CalFREE

Linearity correction is rarely needed, if ever.

Analog Gain Jumper is typically 3mV/V – this is the standard load cell rating in the industry. To confirm ask scale company if load cells are 2mV/V or 3mV/V, cells are labeled with this information. 3 is standard, 2 is old and rare but you might run into them.

Basic Calibration-Only Use Traditional

■ Traditional

- Most accurate
- Utilizes known test masses
- Required for approved installations

■ Step Calibration

- Commonly used technique for large tanks & vessels
- This procedure helps to make the sequence easier to manage

■ CalFREE™

- Calibration without test weights
- Utilizes span values of load cells to compute the calibration of the scale
- Does not accommodate mechanical interactions
- Not for Approved applications

IP=192.168.0.1 20/Mar/2006 15:24

Scale 4 Calibration

Geo Code	16
Base Serial Number	
Calibration Units	kg
Linearity Adjust	Disabled
Analog Gain Jumper	3 mV/V

Internal usage only

Basic Calibration – Steps for Traditional

- Navigate to Calibration
 - [Scale 1 / Calibration]
- Defaults should be as displayed here except lb not kg-no changes needed, in most cases use defaults
- Press Zero softkey
 - Ensure Scale is Empty
 - Press Start
- Press Span softkey
 - Enter test weight value
 - Add Test Weight
 - Press Start
- Exit to Home Screen

IP=192.168.0.1		25/Mar/2006 11:48	
Scale 2 Calibration

MasterWeigh Infinity PC Program Setup

- Install AGRIS and Pervasive and license both on Pc
- In C:\Agris\Packages create a folder called BLK
- On Pc navigate to C:\Agris\Packages\One directory
- Locate the BLK_IND780.Zip file
- Copy BLK_IND780.zip to C:\Agris\Packages\BLK
- Extract contents of file
- Re-name ubulkwghi.exe to bulkwghi.exe
- In oneWeigh setup scale definition for BulkWeigh and choose IND780 for equipment type

(FIG.1)

Working with Commodities

Adding a commodity (Fig. 1)

1. From the MasterWeigh Infinity Main Menu, select **Database Maintenance (F11)**, and then **Commodity**.
2. Click **Add**.
3. In text boxes on the window, type commodity information.
4. Click **Update**.
5. Click **Exit**.

Changing a commodity

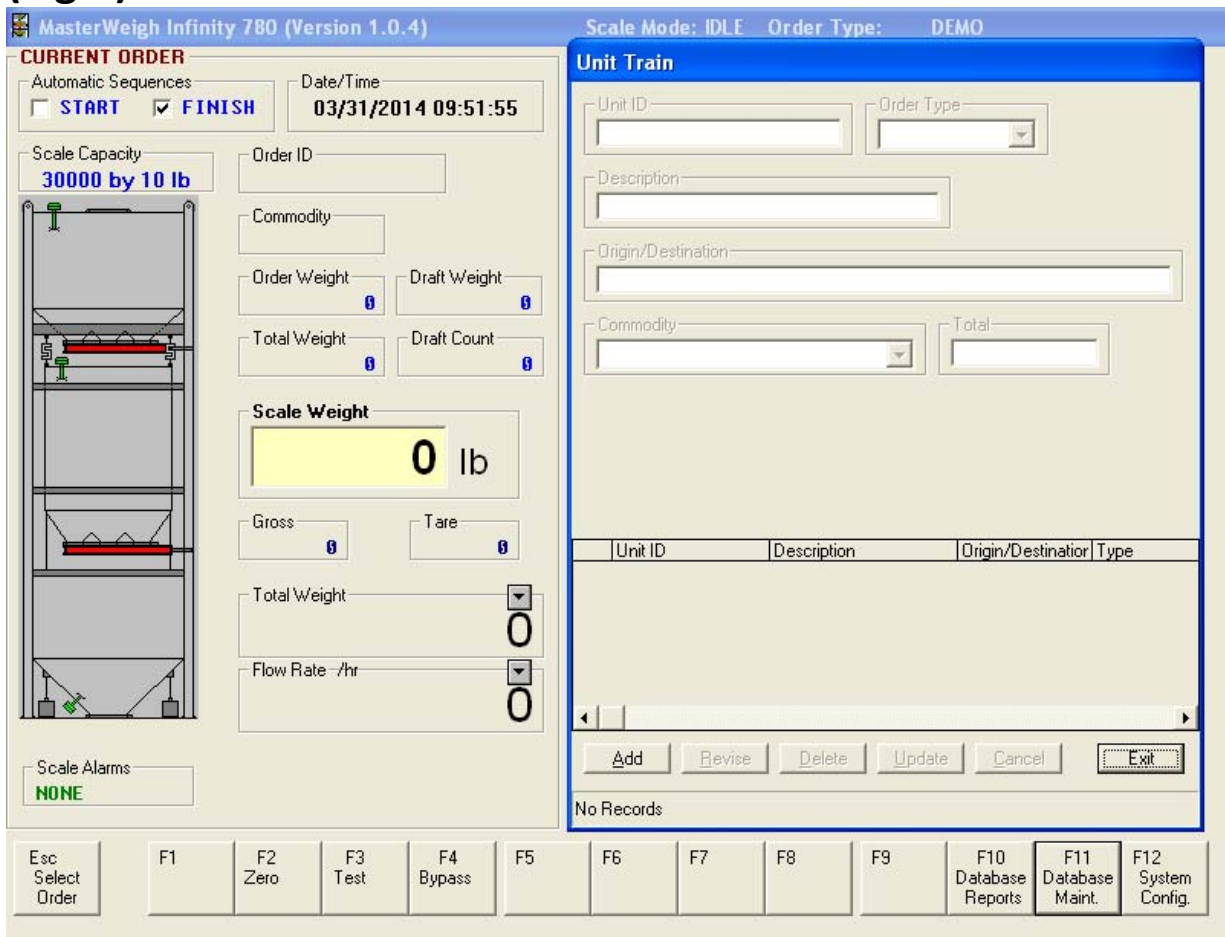

1. From the MasterWeigh Infinity Main Menu, select **Database Maintenance (F11)**, and then **Commodity**.
2. From the list box, select a commodity.
3. Click **Revise**.

4. Select and change information in any of the text boxes.
5. Click **Update**.
6. Click **Exit**.

Deleting a commodity (Fig. 1)

1. From the MasterWeigh Infinity Main Menu, select **Database Maintenance (F11)**, and then **Commodity**.
2. From the list box select a commodity.
3. Click **Delete**.
4. Click **Exit**.

(Fig.2)

Working with Unit Train Information

Adding a unit train (Fig. 2)

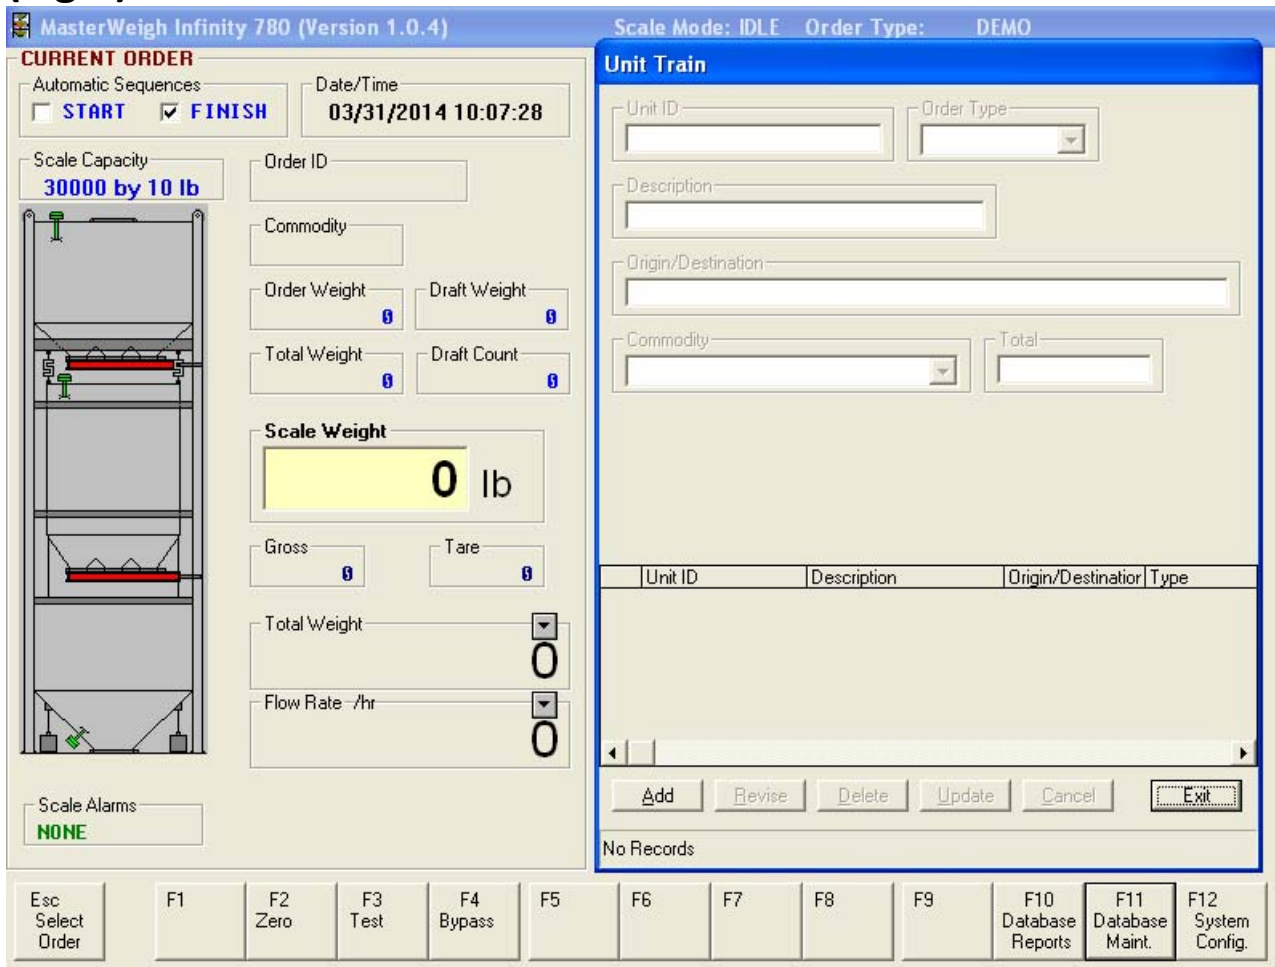

1. From the MasterWeigh Infinity Main Menu, select **Database Maintenance (F11)**, and then **Unit Train**.

2. Click **Add**.
3. In text boxes on the window, type **Unit Train** information.
4. Click **Update**.
5. Click **Exit**.

Changing a unit train (Fig.2)

1. From the MasterWeigh Infinity Main Menu, select **Database Maintenance (F11)**, and then **Unit Train**.
2. From the list box, select the **Unit Train** to be revised.
3. Click **Revised**.
4. Select and change information in any of the text boxes.
5. Click **Update**.
6. Click **Exit**.

(Fig.3)

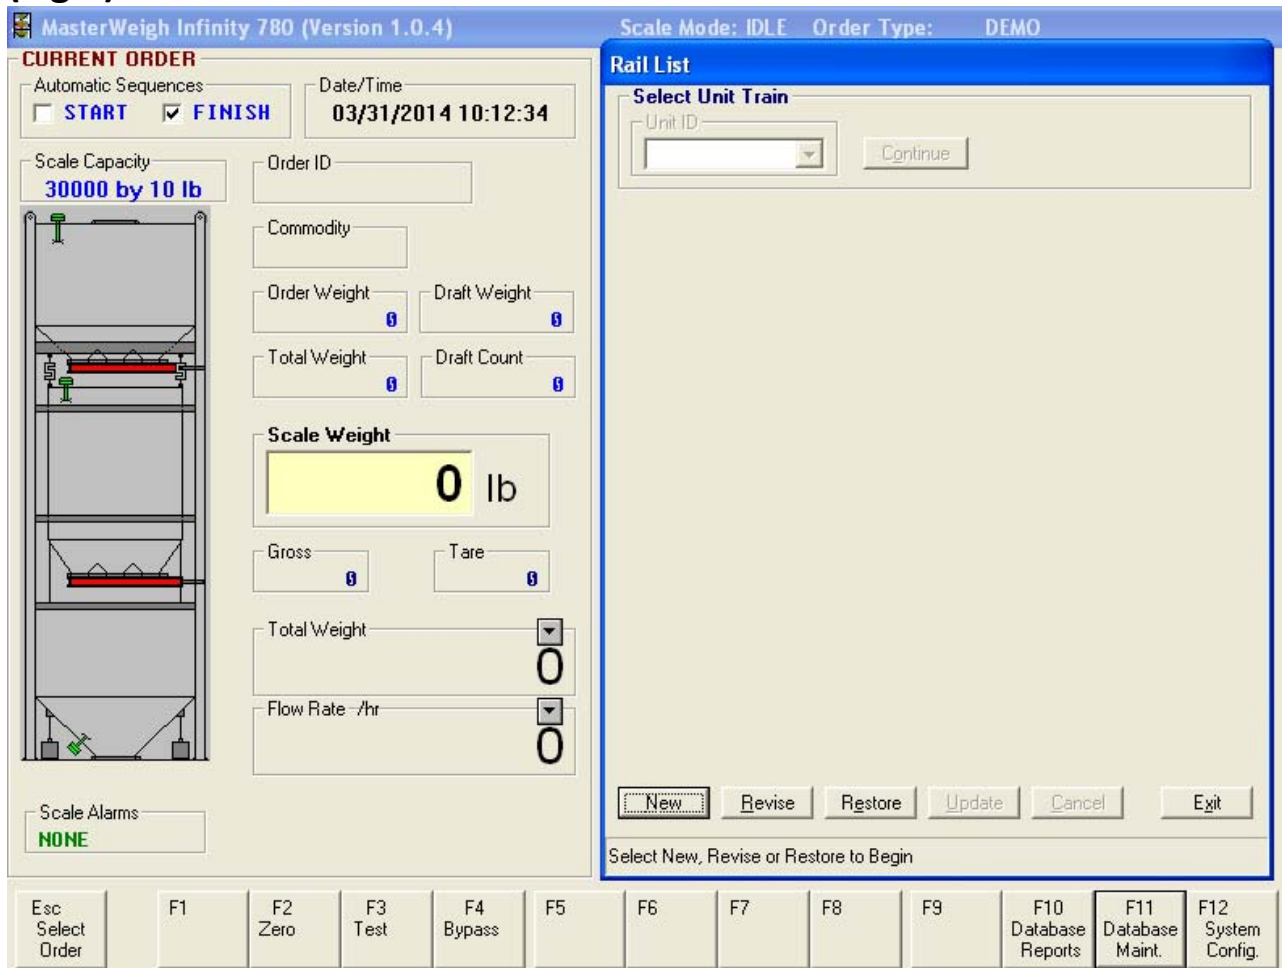

Working with Unit Train Information (continued)

Deleting a unit train (Fig.3)

Note: Deleting a Unit Train will result in the loss of all associated cars, whether they are weighed or not. A unit train cannot be deleted if it is actively being loading or unloaded.

1. From the MasterWeigh Infinity Main Menu, select **Database Maintenance (F11)**, and then **Unit Train**
2. From the list box, select the Unit Train to be deleted.
3. Click **Delete**.
4. Click **Exit**.

(Fig.4)

Adding a new unit train from rail list (Fig. 4)

1. From the MasterWeigh Infinity Main Menu, select **Database Maintenance (F11)**, and then **Rail List**.
2. Click **New**

3. In text boxes on the window, type Unit Train information.
4. Click **Update**.
5. Click **Add**.
6. In text boxes on the window, type Rail Car information.
7. Click **Update**.
8. Click **Exit**.

Working with Unit Train Information (continue)

Adding a car to a unit train (Fig. 4)

1. From the MasterWeigh Infinity Main Menu, select **Database Maintenance (F11)**, and then **Rail List**.
2. Click **Revise**.
3. From the list box, select the **Unit Train** to be revised.
4. Click **Continue**.
5. Click **Add**
6. In text boxes on the window, type Rail Car information.
7. Click **Update**.
8. Click **Exit**.

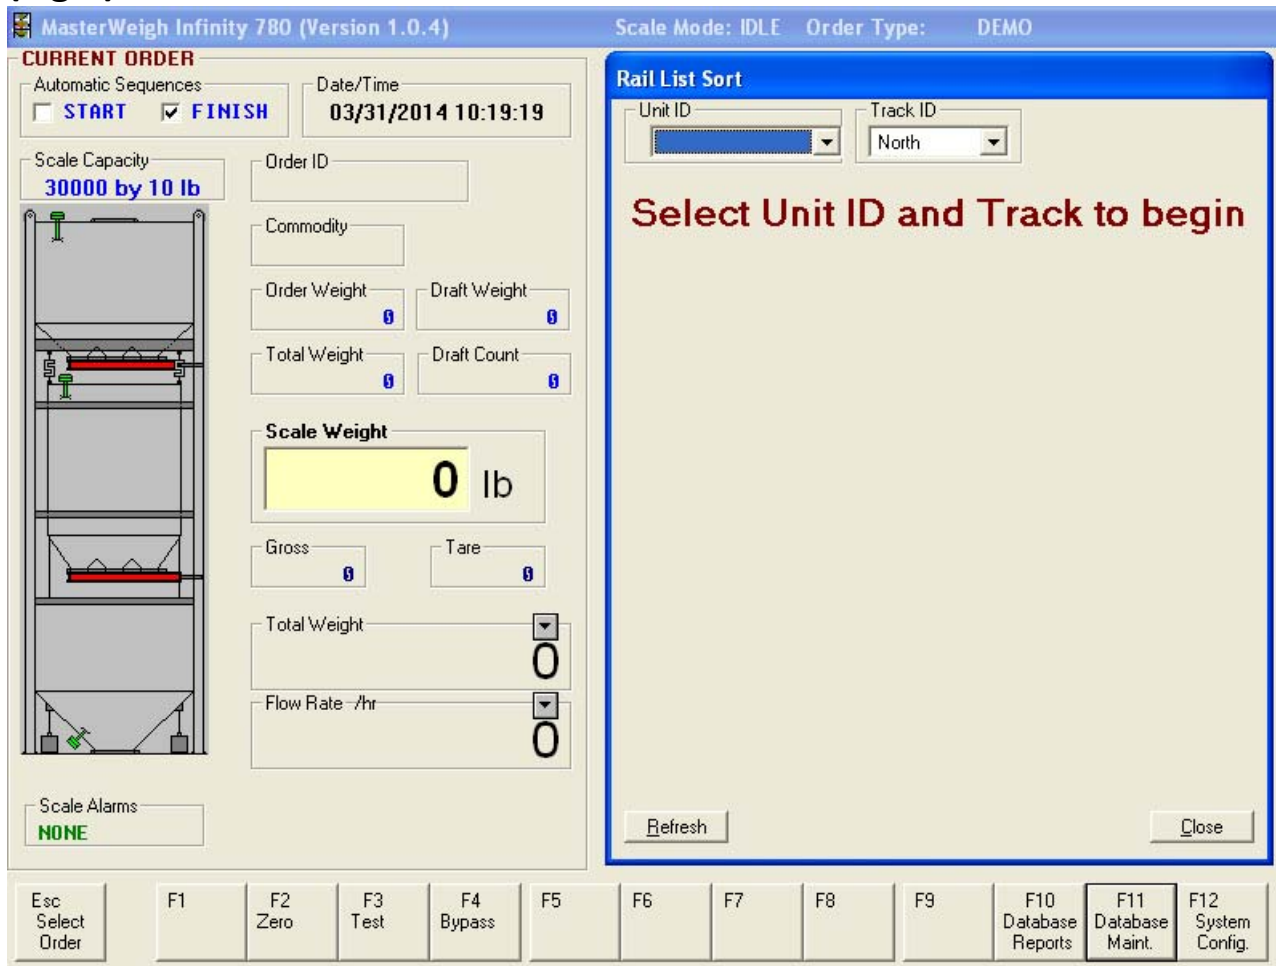

Changing a car in a unit train (Fig. 4)

1. From the MasterWeigh Infinity Main Menu, select **Database Maintenance (F11)**, and them **Rail List**.
2. Click **Revise**.
3. From the list box, select the Unit Train to be revised.
4. Click **Continue**.
5. From the list box, select the Rail Car to be revised.
6. Click **Revised**.
7. Select and change information in any of the text boxes.
8. Click **Update**.
9. Click **Exit**.

Deleting a car from a unit train (Fig. 4)

1. From the MasterWeigh Infinity Main Menu, select **Database Maintenance (F11)**, and them Rail List.
 2. Click **Revise**.
 3. From the list box, select the Unit Train to be revised.
 4. Click **Continue**.
- Note:** Click More/Hide to display user defined Rail Car Information
5. From the list box, select the Car to be deleted.
 6. Click **Exit**.

(Fig.5)

Working with Unit Train Information

Sorting rail cars in a unit train (Fig. 5)

1. From the MasterWeigh Infinity Main Menu, select **Database Maintenance (F11)**, and then **Rail List Sorting**.
2. From the list box, select the **Unit Train** to be sorted. (Fig. 5)
3. From the list box, change the **Rail Car Sequence Number** as needed. (Fig. 6)
4. Click **Refresh**.
5. Click **Exit**.

(Fig.6)

Working with Rail Certificates

Printing individual rail certificates (Fig. 6)

1. From the MasterWeigh Infinity Main Menu, select **Database Reports (F10)**, and then **Rail Certificate(s)**.
2. From the box list, select the **Unit Train and Car Number**.
3. Click **Printer**.
4. Click **Print Car**.

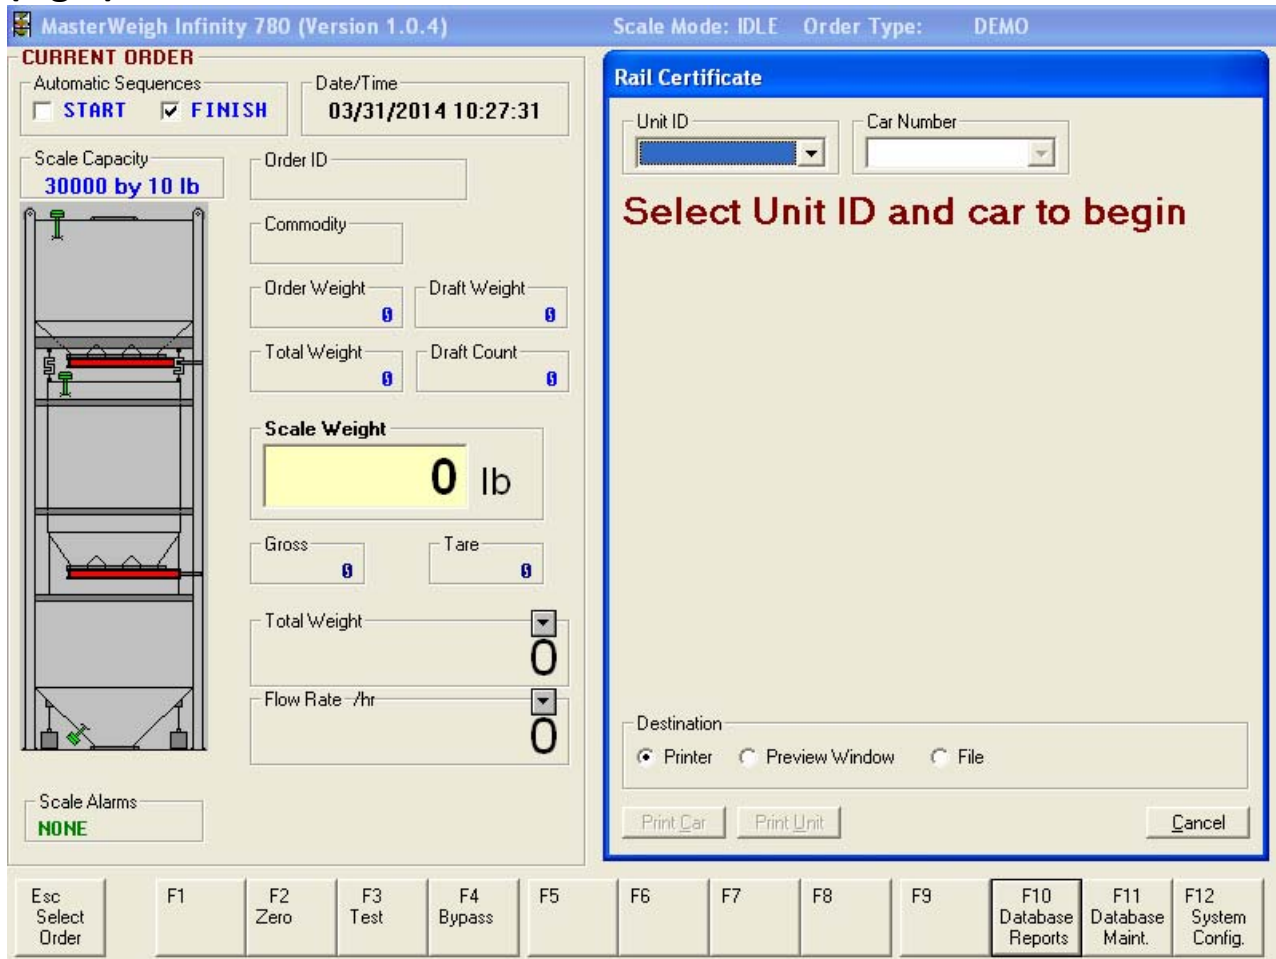

Previewing individual rail certificates (Fig. 10)

1. From the MasterWeigh Infinity Main Menu, select **Database Reports (F10)**, and then **Rail Certificate(s)**.
2. From the list box, select the **Unit Train and Car Number**.
3. Click **Preview Window**.
4. Click **Print Car**.

Creating a print file for individual rail certificates (Fig. 10)

1. From the MasterWeigh Infinity Main Menu, select Database Reports (F10), and then Rail Certificate(s).
2. From the list box, select the Unit Train and Car Number.
3. Click **File**.
4. Click **Print Car**.
5. Type name of File and select directory that file will be stored in.

(Fig.6)

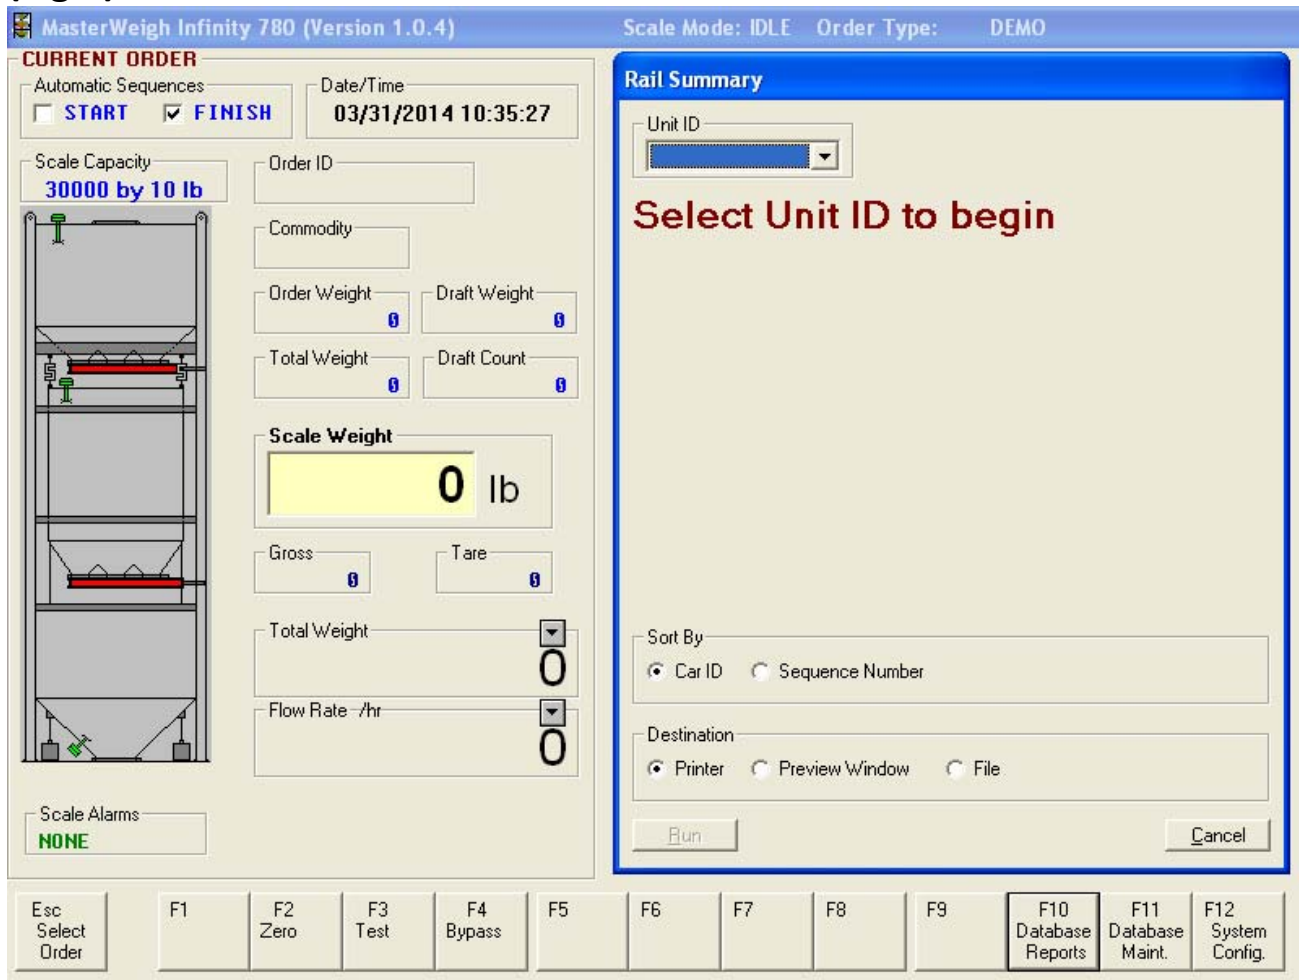

Working with Rail Certificates (continued)

Printing rail certificates for an entire unit train (Fig. 6)

1. From the MasterWeigh Infinity Main Menu, select Database Reports (F10), and then Unit Train Summary.
2. From the list box, select the Unit Train.
3. Click **Printer**.
4. Click **Print Unit**.

(Fig.7)

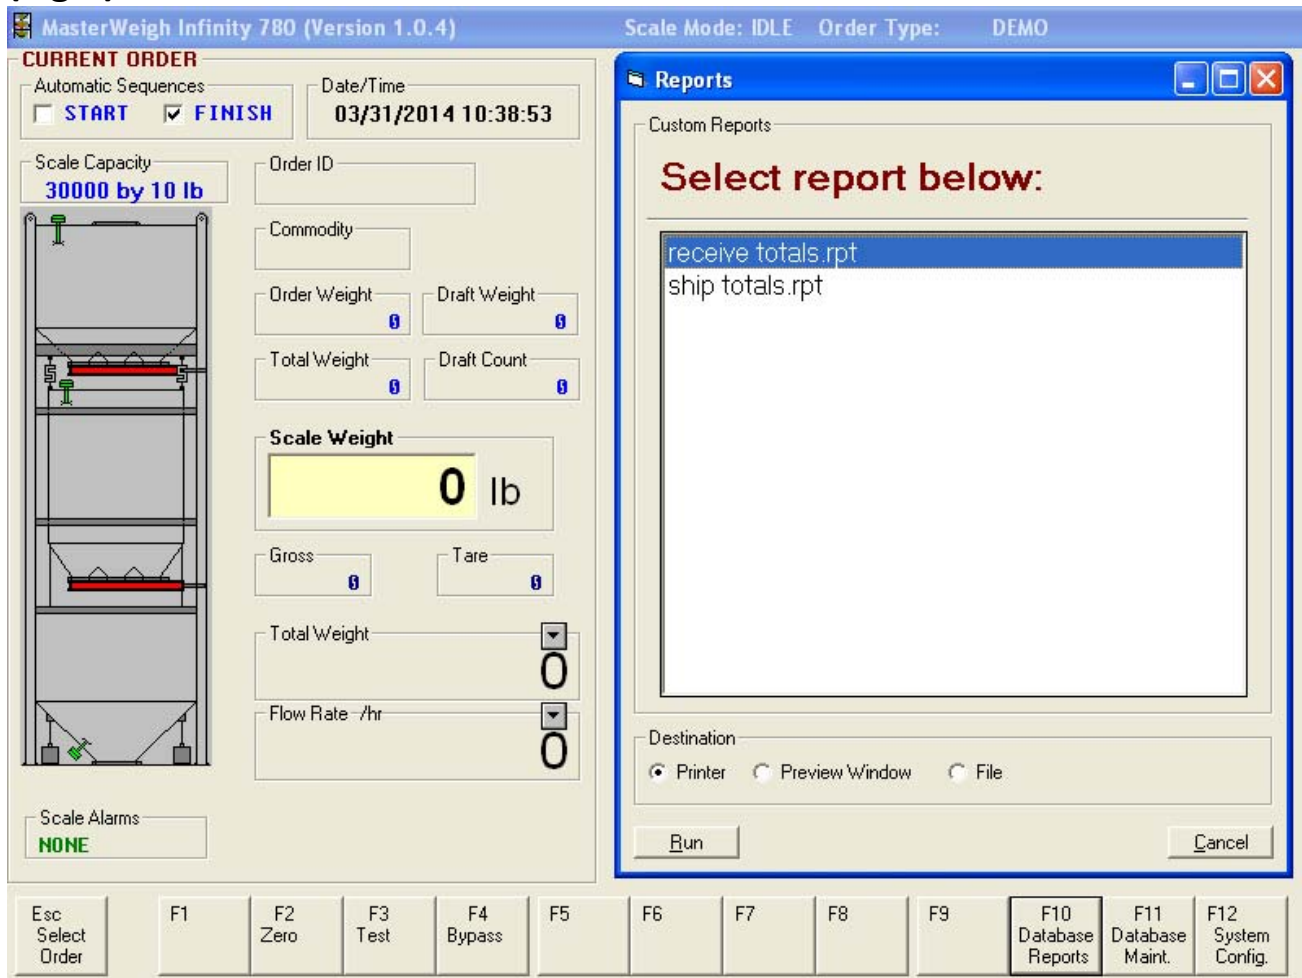

Printing reports

Printing a unit train summary (Fig. 7)

1. From the MasterWeigh Infinity Main Menu, select **Database Reports (F10)**, and then **Unit Train Summary**.
2. From the list box, select the **Unit Train**.
3. Click **Sequence Number**
4. Click **Printer**.
5. Click **Run**.

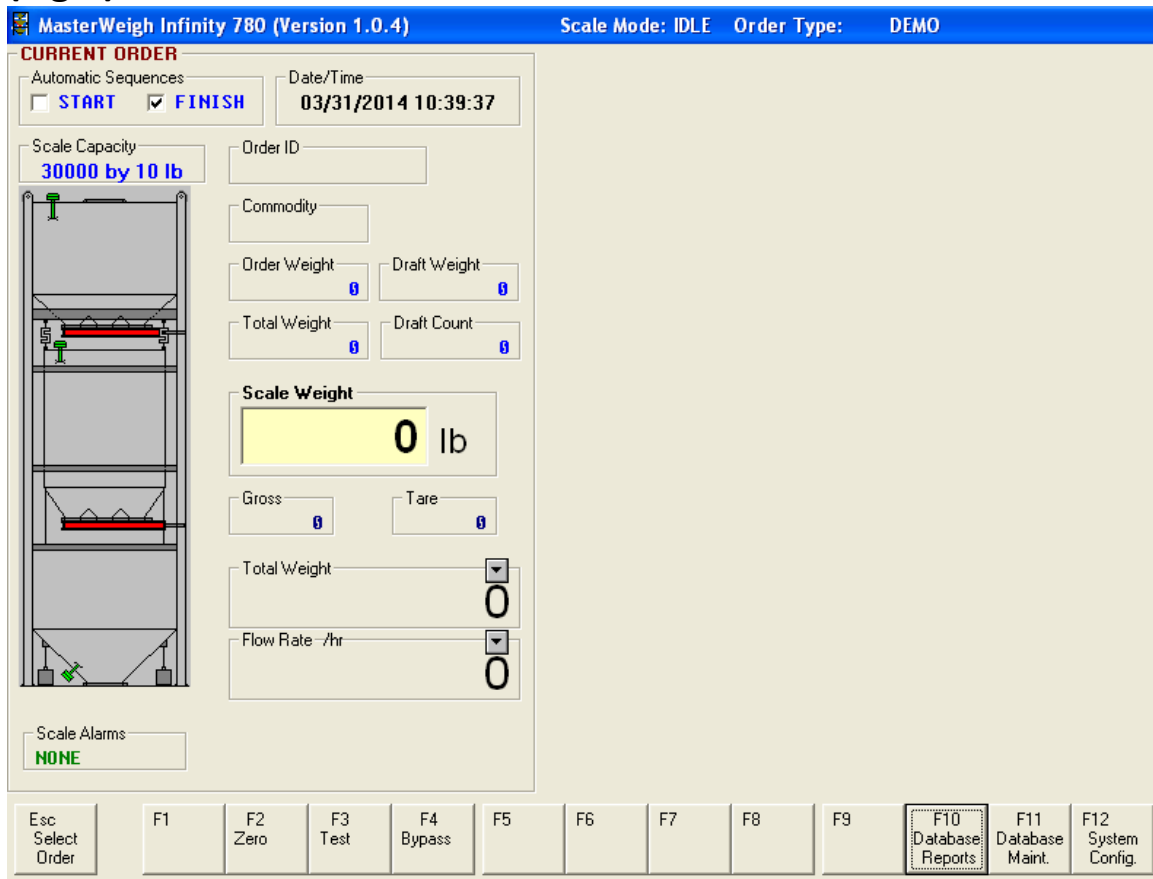

(Fig.8)

Printing user defined reports (Fig. 8)

1. From the MasterWeigh Infinity Main Menu, select **Database Reports (F10)**, and then **User Defined Report**.
2. From the list box, select the report.
3. Click **Printer**.
4. Click **Run**.

(Fig.9)

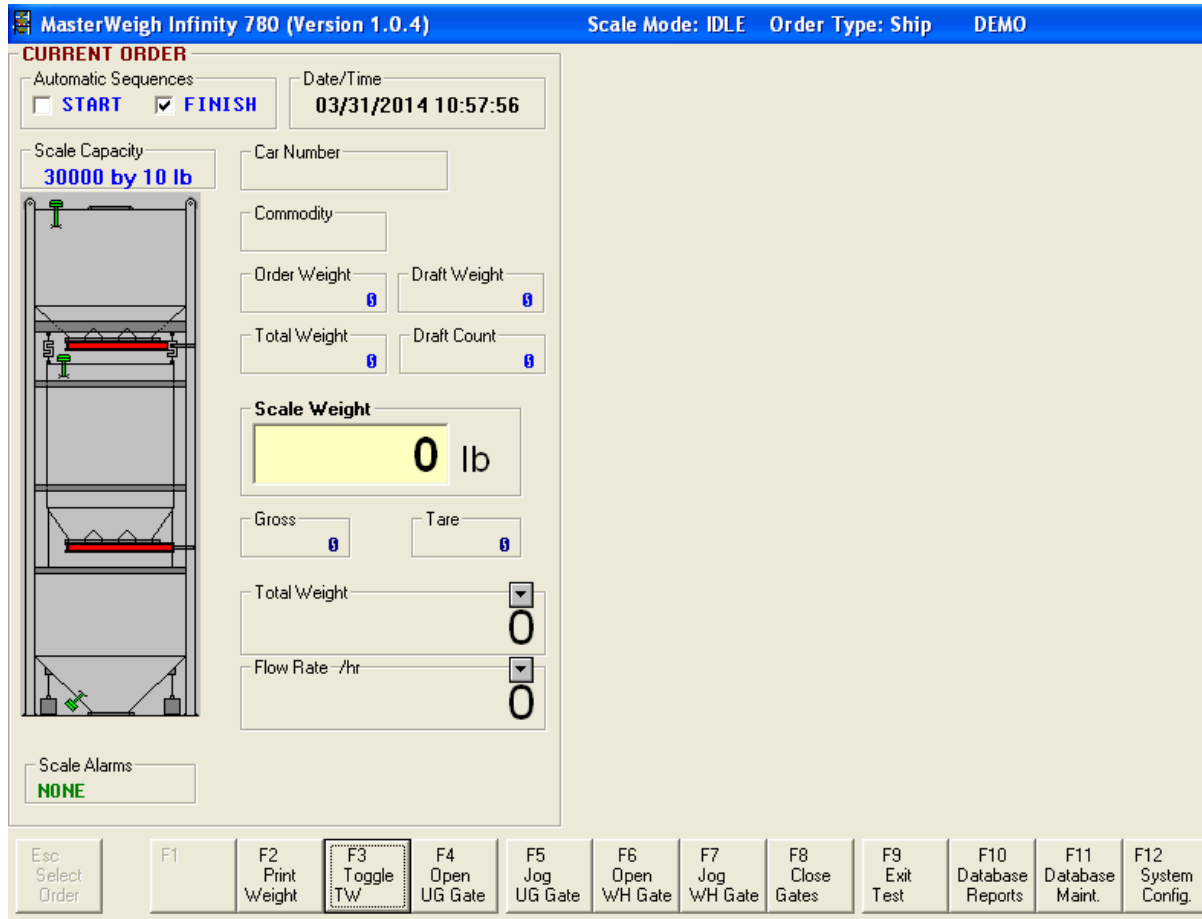

Testing the Scale and Gates

Zeroing scale (Fig. 9)

1. From the MasterWeigh Infinity Main Menu, click **Zero** (F2).

Note: scale will only zero if displayed weight is within 1.9% of capacity.

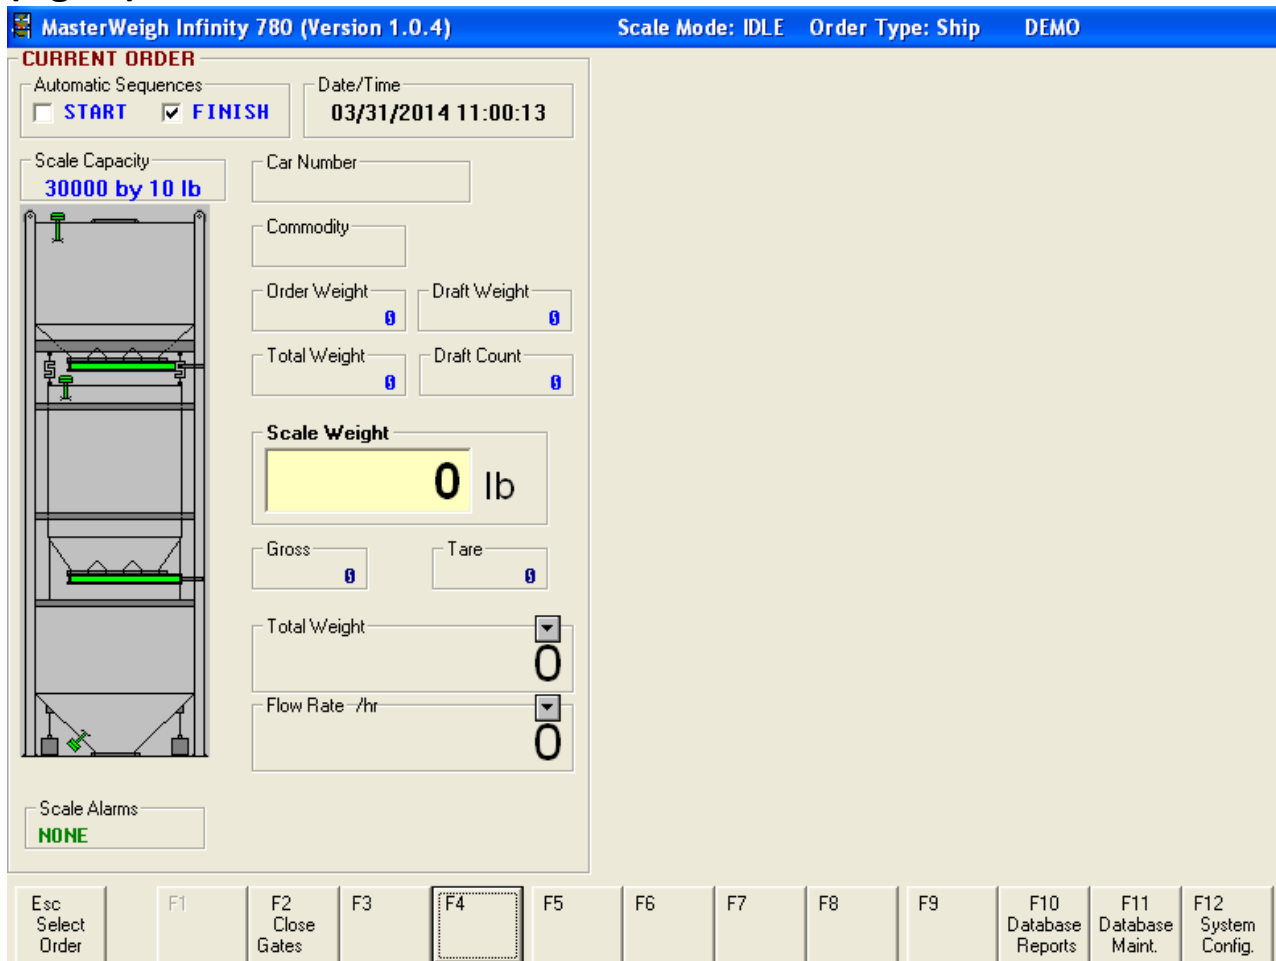

(Fig.10)

Manually testing hopper system gates and weights (Fig. 10)

1. From the MasterWeigh Infinity Main Menu, click **Test (F3)**
2. Select the appropriate Function Key to perform gate operations or to Raise the Lower Test Weight (if equipped).
3. Click **Exit Test (F9)**.

(Fig.11)

Bypassing the scale (Fig. 11)

1. From the MasterWeigh Infinity Main Menu, click **Bypass** (F4). Both gates on hopper system will be signaled to open.

(Fig.16)

The screenshot displays the MasterWeigh Infinity 780 software interface. The title bar indicates the version is 1.0.4 and the current mode is AUTO. The interface is divided into several sections:

- CURRENT ORDER:** Includes options for Automatic Sequences (START and FINISH), Date/Time (03/31/2014 11:11:28), Scale Capacity (30000 by 10 lb), Car Number (test1), Commodity (corn), Running Total (10190), Order Weight (50000), and Draft Weight (9953). A Scale Weight display shows 0 lb. Gross weight is 10350 and Tare is 0. Total Weight is 10190 and Flow Rate is 0 bushels/hr. Scale Alarms are set to NONE.
- Unit Ship Selection:** Unit ID is 'test' and Track ID is 'North'. A table shows the current weighing record:

Car Number	Status	Seq.	Order Wt	Net Wt
test1	Weighing	1	50000	0

- Detail:** Fields for Car Number (test1), Seq No (1), Order Weight (50000), Net Weight (0), Commodity (corn), Type, Volume, Seal Numbers, and Remarks.
- Next Up:** Fields for Car Number, Seq. No., and Order Weight.

At the bottom, a function key bar includes: Esc Cancel Order, F1 Pause, F2 Finish Car, F3 Revise Order, F4, F5 Print Comment, F6 Print Subtotal, F7, F8, F9, F10 Database Reports, F11 Database Maint., and F12 System Config.

Operation from Auto, Pause, and Manual Modes

From auto mode (Fig. 16)

1. From the MasterWeigh Infinity Auto Menu, Click **Revise Order** (F3).
2. In text boxes on the window, type the **new Order (origin) Weight** or **Draft Weight**.
3. Click **Save**.
