

PREPARING BINS FOR HARVEST

SEVEN STEPS TO GET YOUR GRAIN BINS READY FOR HARVEST

Ensure your grain bins are prepped and ready for harvest:

- ❑ Examine and clean all control boxes and sensors. If any component looks out of order, replace it.
- ❑ Inspect all belts for correct tension and replace any that look worn or problematic.
- ❑ Check chains and drives for tension and lubricate well.
- ❑ Remove debris from the dryer, auger, drag and bin - inside and out.
- ❑ Lubricate all bearings.
- ❑ Ensure safety cages, shields and dump points are secure and in good condition.
- ❑ If any components show damage or excessive wear, replace them.

**During a busy harvest, you can't afford unnecessary down time.
Have your bins ready before the combines roll!**

When maintaining your grain conditioning system and its components, always follow recommended bin safety practices.
