GSI

GSI

GSI

LARGEST GRAIN HOLDING CAPACITY

Drying grain too fast or too slow with the wrong airflow results in low quality grain and/or decreased efficiency. GSI dryers provide the optimal balance between the heat level, retention time and airflow for best grain quality and efficiency.

HIGHLIGHTS

- Single, double or triple module models available
- 420 to 4,000 BPH drying capacity
- All heat or Dry/Cool operation types
- LP or natural gas

GSI QUIET DRYERS™

The GSI Quiet Dryer is 50% quieter than vane axial portable dryers without any loss in capacity or airflow. With a frequency in the 1,000 Hz range, it produces a more comfortable, less harsh tone.

Quiet Dryers use a best-in-class, commercial grade blower - the same blower used in our Zimmerman Tower Dryers. This patent-pending feature, combined with star-fire burner, used on existing vane axial portable dryers, provides an efficient delivery of airflow to the burner.

Quiet Dryer are available in Dry/Cool, featuring a single blower and two plenums, available in either a 60/40 or 50/50 split. This patent-pending design allows for airflow to be optimized in both the upper and lower plenums, which maximizes capacities from model to model.

GSI Stacked Quiet Dryers use a dry/cool 50/50 lower module.

X-STREAM™ DRYERS

Fans and heaters on most traditional dryers are mounted on the same end. The optional X-Stream dryer design features fans and heaters mounted in a staggered configuration on opposite ends of the dryer. With this design, the X-Stream delivers more uniform heat throughout the entire dryer, regardless of column location. The result is a higher quality grain that is more evenly dried at a lower cost and up to a 10 percent gain in efficiency.

ADVANCED DRYER CONTROL

The Vision Network Dryer Control system is designed to take the guesswork out of operating your GSI Portable Dryer. With a quick glance, you can see the operating status of the augers, fans and heaters on the large, easy-to-read color touchscreen. On-screen temperature and moisture-based controls let you modify and manage plenum and grain temperatures quickly and easily.

FEATURES:

- 10.4" TFT color screen with touch screen control
- 32-Bit microprocessor control
- Standard with 13 different language capabilities, including English, Spanish, French, German, Russian, Polish, Portuguese, Dutch, Danish, Bulgarian, Czech, Hungarian and Romanian.
- Plenum temperature manager
- Individual safety monitoring with status displayed on-screen
- Shut-downs logged with time and date
- Safety disconnect on every dryer
- Low voltage safety circuit
- Includes hour meter

WATCHDOG™

The smartphone-compatible WatchDog provides remote dryer control and monitoring, with the same Vision interface you use on your dryer unit.

DRYER START-UP MADE EASY

What used to take two to four hours can now be done automatically. Simply input the incoming moisture of the grain, desired outgoing moisture and the grain type and hit start. Vision Auto-Start will manage and control the pre-drying of the grain and stage the operation of the dryer.

AC METERING ROLLS AND ADJUSTABLE FLOW GATES

A 4" AC variable frequency drive metering roll smoothly transitions grain from your dryer to your handling system. When grain quality is poor and debris is present, adjustable flow gates allow you to customize control of grain volume in each column for more consistent drying.

An optional upgrade to a 7" meter roll system does not require the use of gates.

STATIC MOISTURE SAMPLER

Takes readings only when the grain is static and not flowing. Using GSI's patented discharge auger to ensure that a true cross section of the grain is sampled, a reading is taken once per minute and the dryer automatically adjusts to provide optimal results.

EVEN HEAT AND GRAIN QUALITY

High/Low fire cycling helps to maintain a uniform plenum temperature. Each plenum chamber also has an air-mixing chamber to thoroughly mix the air and heat.

OPTIMIZED AIRFLOW

Airflow is sized to match the basket to achieve consistent airflow and capacity. Additional benefits include high air flow across a wide static pressure range, quiet operation and reduced energy cost.

HIGH EFFICIENCY BURNER

Provides even heat distribution and maximum airflow to the dryer's plenum. An electronic ignition system monitors the burner and a view window provides for easy observation of the burner while in operation. Features include easy-to-adjust vaporizer, large service access door and oil-filled gas pressure gauges.

Standard on GSI dryers, On/Off Fire offers a wider range of plenum temperature control down to five degrees above ambient temperature for wheat and other temperature-sensitive grains.

1100 / Q100 SERIES

CONFIGURATION: Single module, single fan & heater with a single plenum. Not expandable. Available with either Vane Axial Fan or Quiet Blower (GSI Quiet Dryer).

APPLICATION: Small- to medium-sized farms using bins 50,000 bushels or less with adequate bin cooling air. Perfect as a first high speed dryer, the 1100 series delivers between 420 to 1,160 BPH All Heat drying at 5-point removal. While primarily an All Heat corn drying system, the 1100 Series dryer can also be used in Continuous Batch Dry & Cool operation full time or for specific situations – putting a dry cone in a flat bottom wet bin, or occasional soybean or wheat drying – to still be able to deliver cooled grain.

1200 / Q200 SERIES

1200 CONFIGURATION: Single module, 2 vane axial fans & heaters each with its own plenum in a 67/33 split. Not expandable.

Q200 CONFIGURATION (QUIET DRYER): One quiet blower and two heaters in a 67/33 split.

APPLICATION: Small- to medium-sized farms that require flexibility in drying options. The 1200 Series is good for corn and many other grains operating in Dry & Cool mode and good for corn or rice operating in All Heat. Its economical design gives between 400 to 730 BPH Dry & Cool and 680 to 1,160 BPH All Heat at 5-point removal. As with all Vision-equipped, multiple fan GSI dryers, the 1200 Series can be operated in any mode – All Heat, Dry & Cool, Continuous Flow or Batch.

1200S&H / Q200S&H SERIES

1200S&H CONFIGURATION: Single module, two vane axial fans fans and heaters, each with its own plenum in a 50/50 split. S-Series are upgradable with additional modules, while the H-Series is not.

Q200S&H CONFIGURATION (QUIET DRYER): One quiet blower and two heaters in a 50/50 split.

S-SERIES APPLICATION: Small, medium or large farms with plans to expand drying capacity. As the base for a two or three stack dryer, the 1200S Series is ideal for farmers with plans to add a second or third module at a later date. On its own, the 1200S design – similar to the 1200H – is good for those farms that need the maximum capacity on single phase and/or primarily run All Heat or can utilize Staged Auto for Dry & Cool operation.

H-SERIES APPLICATION: The 1200H is primarily Staged Auto or Batch Dry & Cool for corn and many other grains and can operate with corn or rice in All Heat. Economical design that produces between 570 to 700 BPH Dry & Cool and 1,080 to 1,330 BPH All Heat at 5-point removal.

2300 / 2Q00 & 2400 / Q400 SERIES

2300 SERIES CONFIGURATION: 2 modules, 3 fans and heaters, one on the upper module and 2 on the lower module.

2Q00 CONFIGURATION (QUIET DRYER): Two modules, two quiet blowers, and three heaters, one on the upper module and two on the lower module.

2400 SERIES CONFIGURATION: Two modules, four fans and heaters, two on each module.

Q400 CONFIGURATION (QUIET DRYER): Two modules, two quiet blowers and four heaters.

APPLICATION: Medium to large farms who want to increase grain drying capacity without increasing the footprint. Primarily continuous Dry & Cool for corn and many other grains or All Heat for corn or rice. (Note: it takes bins no larger than 50,000 bu. to cool corn dried in the All Heat mode at no more than 1,500 BPH capacity for safe cooling and storage without special management.) Delivers 1,000 to 1,840 BPH Dry & Cool and 1,460 to 2,700 BPH All Heat high speed drying at 5-point removal.

3400 / 3Q00 & 3600 / Q600 SERIES

3400 SERIES CONFIG.: 3 modules, 4 fans & heaters, one on the upper and middle module and 2 on the lower module.

3Q00 CONFIGURATION (QUIET DRYER): Three modules, three quiet blowers, and four heaters, one on the upper and middle module and two on the lower module.

3600 SERIES CONFIGURATION: Three modules, six fans & heaters, two each on all three modules.

Q600 CONFIGURATION (QUIET DRYER): Three modules, three quiet blowers and six heaters.

APPLICATION: The max. grain drying capacity in a Portable Dryer for large farm operations. Primarily continuous Dry & Cool for corn and many other grains or All Heat for corn or rice. (Note it takes bins no larger than 50,000 bu. to cool corn dried in the All Heat mode at no more than 1,500 BPH capacity for safe cooling and storage without special management.) Economical design delivers 840 to 2,450 BPH Dry & Cool and 1,000 to 4,000 BPH All Heat high speed drying at 5-point removal.

X-STREAM SERIES

CONFIGURATION: Various. X-Stream is an optional rearrangement of the fans on various dryers (1200H, 1200S, 2300, 2400, 3400, or 3600 Series).

APPLICATION: Any size farm that wants to optimize grain drying abilities by drying grain more evenly. Adding the X-Stream Series will even out the heat delivery from front to back of the dryer, improving quality and efficiency. These dryers maintain all the features, benefits and best use criteria of the parent series.

5 PT. 20-15%	445	485	600	1,375	1,500	1,835	1,380	1,840	1,800	2,015	2,445	1,800	2,020

Amp and power info can be found on the previous specification pages, listed under the corresponding standard model numbers less the X.

1 – Capacities listed are wet bushels, for mature unfrozen #2 yellow shelled dent corn at listed moisture content and are estimates based on drying principles, field results and computer simulation. Variance may occur due to grain's physiological factors (kernel size, chemical composition, variety, maturity), excessive fines, adverse weather conditions, etc.

2 – Grain discharged hot from the dryer will result in a final moisture content of 15% after cooling in the bin.

3 – Shortest possible height in [].

4 – Quiet Dryer in [].

5 – Minimum: Fan[s] & Dryer Load & Unload motor name plate amperages + 5 for control & VFD load.

Maximum: Fan[s] & Dryer Load & Unload & largest auxiliary motor name plate amperages + 5 for control & VFD load.

6 – Small Grain Screen Perforations (0.055") are available for canola and other small grains. There will be an approximate 20% reduction in capacity on corn and other large grains.

7 – Single to three phase converters can be used. [see page 13 for details]

† – S-Series dryers are upgradable with additional modules, while the H-Series is not.

★ – Limited by Meter Roll maximum capacity.
